

Science Worksheet - Chapter 3: The Water Cycle

Name: Priya Sharma

Phone: 9876543210

Email: priya.sharma@example.com

Class: 7B

The water cycle is the continuous movement of water within the Earth and atmosphere. Liquid water evaporates into water vapor, rises and condenses to form clouds, then precipitates back to earth as rain or snow. Evaporation happens fastest in warm, sunny conditions.

Isaac Newton once said that understanding nature requires careful, patient observation. Scientists study the water cycle the same way, by measuring rainfall, humidity and temperature over long periods of time.

Q1: What is evaporation?

Q2: Name the four main stages of the water cycle.
